SEX DAY

check this ► www.dzienseksu.pl

Since 2018 I've been developing my own project - an annual event named Sex Education Fair. This year we did it online as well as last year. Our results are very good. The data show a huge engagement during our events. We are now implementing a new product - online courses. We conducted market research and analyzed the risk for the product. I defined each stage of the project and created the roadmap. We use Scrum. I have a team (7 people), including marketing and design. We fill an important niche in Poland.

This has been a hands-on experience for me in project management.

PROFILE

I am interested in implementing technology-based solutions and a business approach in art and culture industry. I strive to acquire cutting-edge skills which I could use to make art and culture more popular as a leisure activity and more profitable for artists. I also believe in business sustainability as the future of management. At work I am inspired by Laloux model and Agile methods.

EXPERIENCE

When I was younger I had various jobs...

...but here are some related to project management:

2015-2019 - Polska Press Group

I coordinated a small team (4-5 people) responsible for the acquisition of participants for the most important and profitable marketing project in that company - sms competition. I was in charge of training, monitoring and checking the results of our work. I learned there the rules of a big company, how to manage the responsibility for the team, and how to delegate tasks.

2018-2021 - Polish Association of Psychology Students and Graduates (PSSIAP)

In PSSIAP, I was a member of the local board. I organised the work of our branch, e.g. I introduced Facebook Ads and arranged an outsource online marketing training for the team.

2019-2020 - Clear Sounds foundation

In that organisation I was a partyworker. Partyworking is an alternative, modern way of risky behaviours prevention in clubbing (e.g. substance abuse, unsafe sex). I learned the challenges faced by projects based on a maverick and unorthodox approach there. The president of the foundation liked to ask me about my ideas. I have made some changes (e.g. streetworkers started to give out sanitary pads to homeless women).

2020 (Aug. - Sep.) - Goyki3 ArtInkubator

I helped the organizers of the biggest, international literature festival in Poland - *Sopot by the Book*. There were some issues that I independently identified and solved (e.g. correction of product photos for e-commerce). I also planned the web content based on UX wireframes.

2021 (Jan.-now)- Relief for Medics - www.ulgamedykom.pl

It is a project that I developed on the basis of my final work in one of my University classes. I planned and implemented the process of creating a platform, where medics could find psychological help. We were sponsored by a nurse training company. I am the lead of the team (3 people). We work in Kanban.
